

EEC 2S

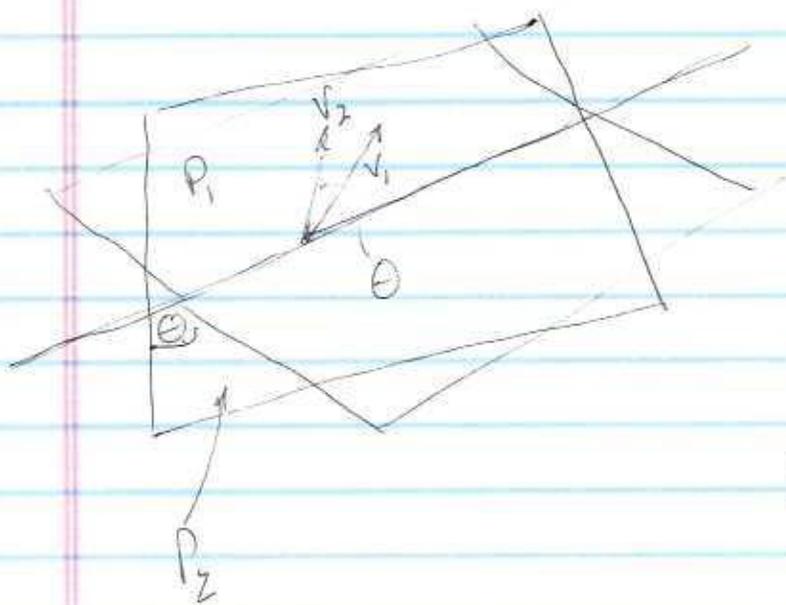

①

1/28

$ A \times B \cdot C $	$ A \times C \cdot B $
$ B \times C \cdot A $	$ C \times B \cdot A $
$ C \times A \cdot B $	$ B \times A \cdot C $
↑ all equal	↑ all equal

(2)

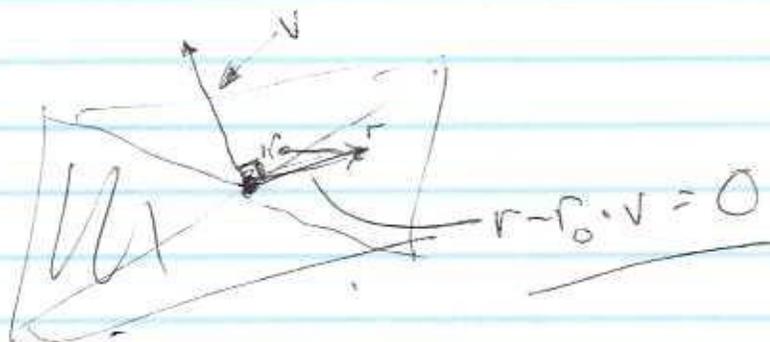

$$r_0 = \langle 0, 0, 0 \rangle$$

$$v = \langle 1, -2, 4 \rangle$$

$$r(t) = r_0 + tv$$

$$t = -2$$

③

$$Ax + By + Cz = D$$

$$\rightarrow \frac{\langle A, B, C \rangle}{|\langle A, B, C \rangle|} = \text{unit direction vector}$$

$$2x - 3z = 1 + y$$

$$2x - y - 3z = 1$$

$$\langle 2, -1, -3 \rangle$$

What is angle between these planes:

$$\textcircled{1} \quad 2x - y - 3z = 1 \quad \langle 2, -1, -3 \rangle \quad \sqrt{14}$$

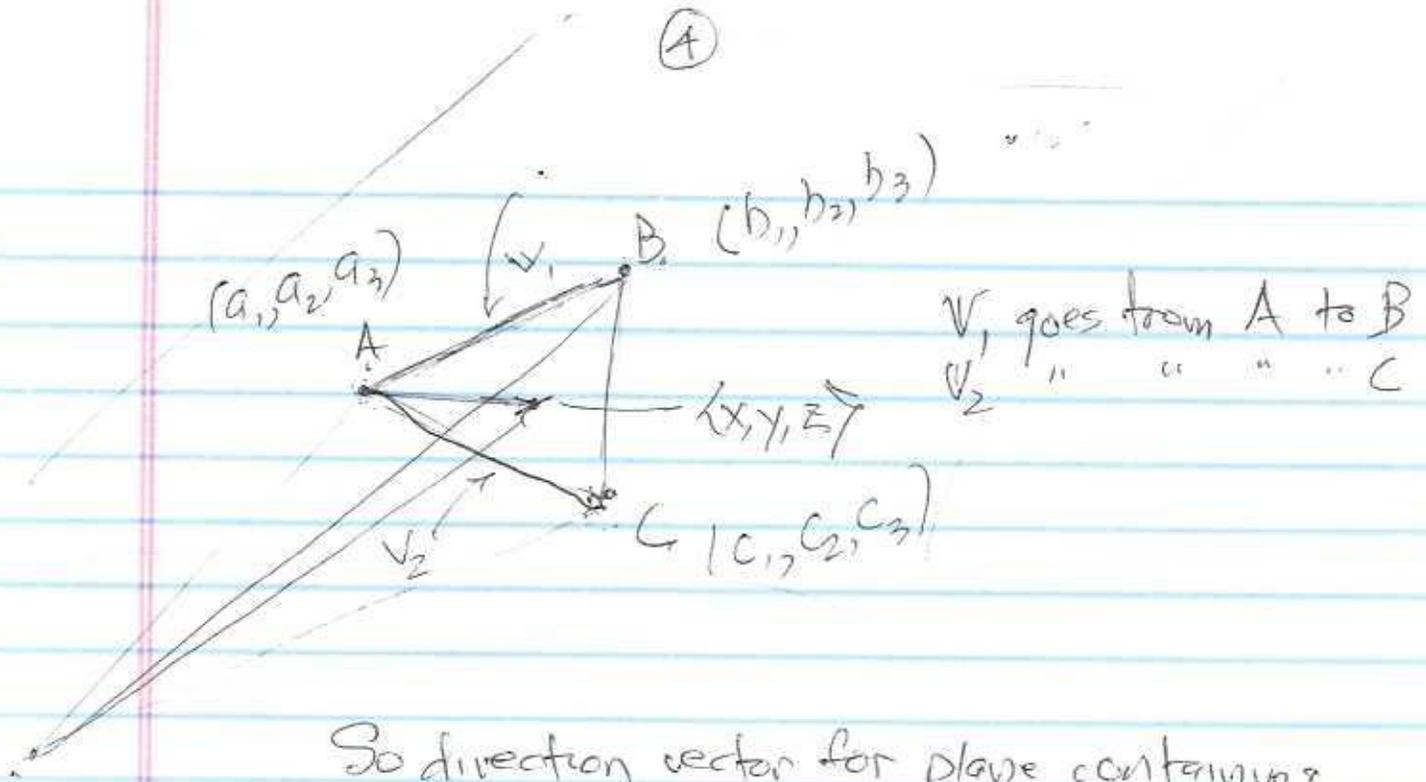

$$\textcircled{2} \quad 4x + 7y + 2z = 5 \quad \langle 4, 7, 2 \rangle \quad \sqrt{69}$$

8 - 7 - 6

$$\theta = \arccos \frac{|\langle -5 \rangle|}{\sqrt{14 \cdot 69}}$$

$$\frac{|\langle -5 \rangle|}{\sqrt{14 \cdot 69}}$$

(4)

So direction vector for plane containing

A, B, & C is $v_1 \times v_2 = V$ (dir vector)

~~$\langle a_1, a_2, a_3 \rangle \cdot \langle x, y, z \rangle = 0$~~

$\langle x, y, z \rangle - \langle a_1, a_2, a_3 \rangle \cdot V = 0$
